Statistically, 2022 may not have been the most successful year for the Houston Texans, but in terms of their team development, it was a relative success. Despite not having a draft pick until the third round, of the five players drafted, all started at least two games each, and they all remain on the roster heading into year two - with most battling for first-team reps. "I'd say all five of them have definitely improved relative to where they were - call it a year ago at this time," general manager Nick Caserio. "It speaks to their attitude. It speaks to their work ethic. It speaks to the work that they've put in in the offseason program with Mike Eubanks and the sports performance group and staff. If all five prove to have taken a step forward this season, given what they were able to produce as rookies, this 2021 class could be set for a solid year. Third-round quarterback Davis Mills, 23, was thrown in the deep end in Week 2 after starter Tyrod Taylor went down injured. His inexperience was evident early on, and his mid-season return to the bench did him good, after which he finished the season with an impressive five-game stretch and won the starting job. Fellow third-rounder, wide receiver Nico Collins started eight of 14 appearances, recording 33 receptions for 446 yards, 22 first downs, and a touchdown. This season he looks a safe bet to start opposite Brandin Cooks. Fifth-round tight end Brevin Jordan started two of nine games during what was a relatively quiet season compared to his fellow rookies. However, he flashed as a red zone threat recording 10 first downs and three touchdowns on just 20 receptions. All three of Houston's offensive sophomores have been subject to widely positive reviews this summer. "They've been available," Caserio said. "They've been on the field, they've reshaped their bodies, they've gotten stronger, they're more experienced, they have a routine that's been established and now they're able to go out there and just focus on playing football and improving as a player." Defensively the story was much the same in 2021. 23-year-old linebacker Garret Wallow, a fifth-round pick, played every game as a core special teamer and also went on to make two starts and contribute defensively as the season wore on. Wallow racked up 23 tackles, two tackles for a loss, and one sack. His best game came against the Jacksonville Jaguars in Week 14 where he had a joint-team-leading 11 tackles. Sixth-rounder Lopez was a real surprise. Starting as early as Week 2, the 24-year-old was one of Houston's more consistent defenders starting 15 of his 16 appearances and finishing with 31 tackles, five tackles for a loss, two quarterback hits, and one sack. Caserio isn't one to reveal much of anything publicly. So when he does speak, you listen. Houston's sophomores have impressed Caserio and if he feels that way, you can bet the coaching staff does too. Mills, Collins, Lopez, and Co. could be on their way to a strong 2022 season. The 6L90E transmission is the redheaded stepchild of GM, a company known for producing rugged and reliable work trucks, cargo vans, and box trucks. While it can shift flawlessly and better than many other counterparts, there are known problems. Gearstar helps replace your old transmission with a more powerful option that can get you out of park and onto the track. Is the 6L90 a good transmission? The 6L90 transmission is not a terrible transmission. In fact, it is a high-performance component capable of handling up to 700 horsepower. Along with the 6L80 model, this transmission powers the best cars and trucks that GM offers. The 6L90E is not terrible by specification but contains inherent design flaws. Known issues include: Not shifting out of park Popping out of park randomly A loud rattling sound when in reverse The plucking rod actuator assembly causes these issues because it is known to fail. Moisture is known to enter the casing as well, destroying major components that keep your car running at all. 6L90 transmission swap A 6L90 transmission swap eliminates these issues with performance parts and quality manufacturing processes. Gearstar certifies every six-liter transmission before you use it. With one of the best warranties in the industry, you know that you are receiving a product you can trust. A transmission upgrade gets you on the road and track quickly. Since the 6L90E powers many pickups such as the Silverado, businesses should look to upgrade as quickly as possible. Which cars have a 6L90E transmission? GM uses the 6L90 transmission on different trucks, passenger, and cargo vans. The superior torque handling and weight capacity work well in commercial, construction, and industrial settings. The Silverado, Express, Sierra, and Savana started using this model in 2007 and continue to do so today. This makes the common issues worse due to the payloads and high usage that these vehicles usually handle. What transmission can I swap with my 6L90E? When you are ready to swap for a new transmission, there are options. The 6L90 MYD offers the same features you love without many of the issues. Consider the 6L90 MYD transmission specs: 452 maximum horsepower 531 maximum lb-ft of torque 885 lb-ft maximum gearbox torque 15-ton maximum weight This transmission compares directly with the 6L90 E in every way but comes with none of the known issues related to the factory model. These transmissions come with the latest generation friction and steels to improve reliability. Where can I purchase 6L90 MYD transmissions? 6L90 MYD transmissions replace the 6L90E transmissions with a reliable and updated model. Whereas the factory parts on your Silverado, Express, or Sierra notoriously fail to pop out of par or do so randomly, Gearstar's MYD model does not. We inspect every product to ensure that it lives up to our high-quality standards and back them with an industry-leading warranty. Get in touch with us today to find out how to upgrade your stock transmission. Call us at (330) 434-521.
